A factory that produces.....**BETTER BUSINESS DECISIONS**

- We specialise in LEGAL practice management reporting
- We are qualified accountants.
- We understand and enjoy financial concepts and customised reporting requirements.

Our consultants are trained to build specialised automated reports to help law firms make improved business decisions. We have many years of experience designing and building high quality solutions for law firms across Australia.

We **don't sell software** - only our time and expertise. We are solely dedicated to helping our clients increase their profitability by improving the way they make business decisions.

Our client projects typically encompass;

- Process design and implementation
- Report design and implementation
- Report automation and alert / warning systems
- Matter profitability analysis system design and execution

Naturally being accountants we have lots of experience in practice management, general ledger and financial systems, but we also understand other business systems environments, from CRM and Marketing, to HR and workflow automation and more.

Most importantly, it does not matter what Practice Management System or I.T infrastructure your law firm relies on, we can design and implement reports that extract information directly from your systems. Using industry standard reporting tools such as Crystal Reports™ from Business Objects™, and Microsoft SQL Server Reporting Services™ and other similar tools we will find the right solution for your law firm systems and reporting requirements.

Our focus is on the business benefits of reports and automation, so your team spend their time effectively using the data for value added analysis, rather than creating, printing and distributing reports.
